fix first - high-severity accessibility failures could block users with visual impairments

87	86	68	83	97	100
Overall	Usability	Accessibility	Performance	Functional	Integrity

The site logs in successfully for both mobile 3G and senior users, but several accessibility and usability issues remain. The most critical problems are low colour-contrast text and missing accessible labels, which affect all users, especially on mobile. Medium-severity issues like small text, slow load on 3G, and confusing jargon also impact the experience. Core functionality works, but accessibility gaps need remediation before release.

Top risks

- Low colour contrast text (WCAG AA fail)
- Missing accessible label on shopping cart icon
- Text smaller than 12px on multiple elements
- Slow page load on 3G connection (5.1 s)

Simulated users

Persona	Outcome	Steps	Frustration	Goal / how it ended
mobile_3g	success	3	0/100	I need to quickly log in to Swag Labs using the username standard_user and password secret_sauce. *Finally logged in, see inventory page, need to finish goal*
senior	success	5	2/100	I need to log in to Swag Labs with the username “standard_user” and password “secret_sauce” so I can be sure I’m signed in correctly and avoid any payment mistakes. *I see I am logged in, inventory page shows products, so login succeeded.*

Findings (11)

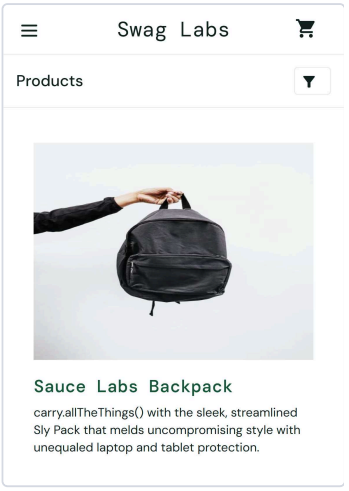

HIGH accessibility measured mobile_3g, senior

F1 · Low colour contrast text (WCAG AA fails) (3)

Examples: a "X" ratio 1.7; a "Facebook" ratio 1.7; a "LinkedIn" ratio 1.7

“Okay, just tap login already.”

Fix: Raise text/background contrast to at least 4.5:1 (3:1 for large text).

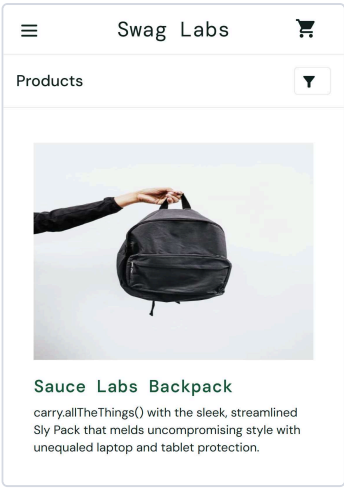

MEDIUM accessibility measured mobile_3g, senior

F2 · Text smaller than 12px (4)

Examples: button#react-burger-menu-btn "Open Menu"; a "X"; a "Facebook"

"Okay, just tap login already."

Fix: Use at least 14-16px for body text.

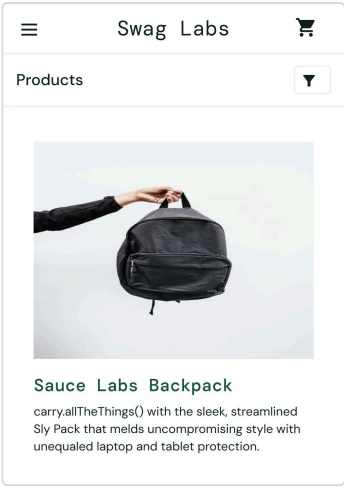

MEDIUM usability AI-observed mobile_3g, senior

F3 · Confusing technical jargon in product description

The text 'carry.allTheThings()' uses programming syntax which is confusing and unnecessary for shopping.

"Okay, I'm in, but this description is weird and I'm in a rush."

Fix: Rewrite product descriptions to remove technical jargon and use clear, user-friendly language.

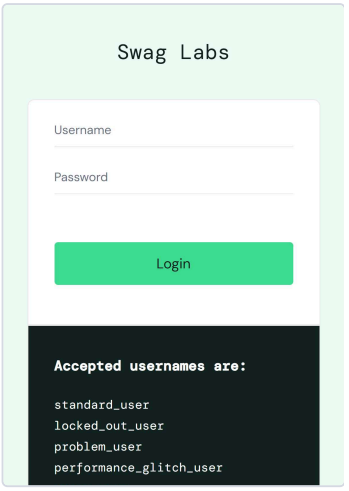

MEDIUM performance measured mobile_3g

F4 · Slow page load: 5.1s on a slow 3G connection

/ took 5051 ms to finish loading.

Fix: Compress images, defer non-critical scripts and cache static assets.

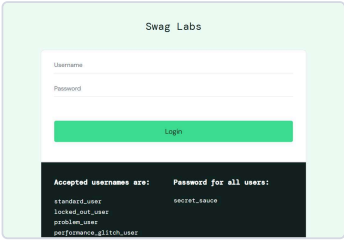

MEDIUM performance measured senior

F5 · Slow page load: 3.2s on a normal connection

/ took 3238 ms to finish loading.

Fix: Compress images, defer non-critical scripts and cache static assets.

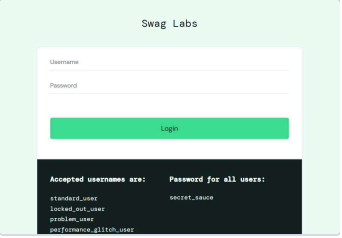

MEDIUM usability AI-observed senior

F6 · Technical jargon in footer instructions confuses users

Footer instructions use terms like 'locked_out_user' that appear as errors to users.

“It looks very plain and empty. I am not sure if this is a secure place to type.”

Fix: Replace technical identifiers with clear, user-friendly language or explanatory tooltips.

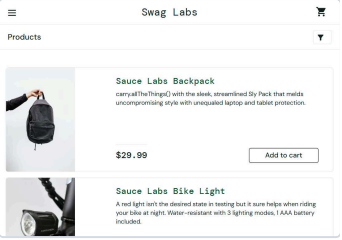

MEDIUM accessibility AI-observed senior

F7 · Shopping cart icon lacks accessible label

The cart icon in the top right has no text label, making its function unclear.

“Everything looks very clean, but I am not sure if I am actually logged in safely.”

Fix: Add an aria-label or visible text such as 'Cart' next to the icon.

LOW functional measured mobile_3g, senior

F8 · Third-party scripts/resources failing (6 errors)

Hosts: events.backtrace.io. Usually ads/analytics; check they do not slow or break the page.

“Finally logged in, see inventory page, need to finish goal”

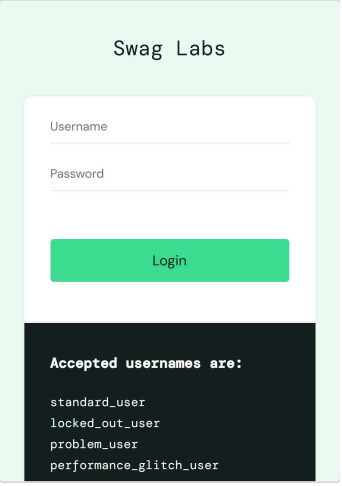

Fix: Load third-party scripts async and make the page resilient when they fail or are blocked.

LOW accessibility measured mobile_3g, senior

F9 · Page has no <h1> heading (1)

Examples: -

Fix: Add one descriptive <h1> per page.

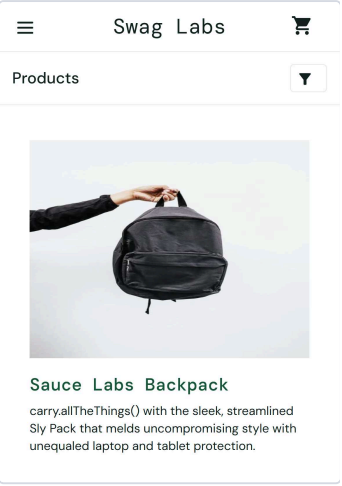

LOW accessibility measured mobile_3g

F10 · Tap targets smaller than 32px (10)

Examples: button#react-burger-menu-btn "Open Menu"; select "Name (A to Z) Name (Z to A) Pr"; a#item_4_title_link "Sauce Labs Backpack"

“Okay, just tap login already.”

Fix: Make touch targets at least 44x44px with spacing between them.

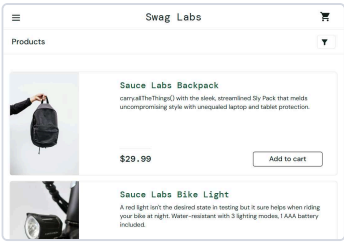

LOW usability AI-observed senior

F11 · Filter icon is small and unlabeled

The funnel filter icon in the header is tiny and missing a descriptive label.

“Everything looks very clean, but I am not sure if I am actually logged in safely.”

Fix: Increase the icon size to meet tap-target guidelines and provide a label or tooltip.

Step-by-step journeys

mobile_3g — success

#1	fill 2 fields: [1] Username='standard_user', [2] Password='secret_sauce'	filled 2 field(s) - not submitted yet	F 0
#2	click [3] "login-button"	page changed after 0.1s, new page	F 0

senior — success

#1	type [1] "Username"	entered - not submitted yet (nothing is sent until you click the form's submit/Update/Apply/Pay button)	F 0
#2	click [3] "login-button"	page changed after 0.1s	F 0
#3	fill 2 fields: [1] Username='standard_user', [2] Password='secret_sauce'	filled 2 field(s) - not submitted yet	F 10
#4	click [4] "login-button"	page changed after 0.1s, new page	F 2

Severity: measured = deterministic browser checks; rule check = business-rule oracle; AI-observed = vision/LLM opinion (capped at medium unless several personas agree).
